

Bob for short. Get it?

Panthers

If you look up on that rock, you will see a cat that's bigger than a bobcat. It's a panther.

What Panthers Look Like

Panthers can have spots. They can be tan, too. Here at the Green Fern Zoo, we have two black panthers. The name of this one is Jet.

That's Jet's sister, Flash, up on the tree branch. Flash has strong legs that help her run fast. She has sharp teeth and sharp claws that help her hunt rabbits and deer. She can use her claws to scamper up a tree if she needs to.

You can see that she is not all black like Jet. She has some spots.

Panthers are bigger than bobcats.

Panthers use their strong legs and sharp claws to get up trees.
