

Family Note

Our class has been identifying attributes (size, color, and shape) of blocks. We are also working with 2-dimensional shapes. Two - dimensional shapes are shapes with 2 dimensions, such as width and height. Triangles, circles, rectangles, and squares are all examples of 2 dimensional shapes. You can often see these shapes within an object. Please help your child locate objects at home with the shapes listed below.

Please return this Home Link to school tomorrow.

1. Find something in your house that has a triangle in it. Write its name or draw a picture.

2. Find something in your house that has a circle in it. Write its name or draw a picture.

3. Find something in your house that has a square in it. Write its name or draw a picture.

4. Find three objects in your home that are the same color. Write their names or draw their pictures. What color are they?
