

Name _____

Family Note

Our class has been working with 2-dimensional and 3-dimensional shapes. For today's homework help your child find 3-dimensional objects and then have them decide what 2-dimensional shapes (square, rectangle, circle, or triangle) make up that object. Some examples of 3-dimensional shapes found at home are; a cereal box, a can, or a DVD player. Have your child draw the shapes that make up the object, help them find the name of the shape in the list below, and then write it next to the drawing.

Please return this Home Link to school tomorrow.

2-Dimensional Shapes

square

circle

rectangle

triangle

rhombus

trapezoid

hexagon

pentagon

Find 3-dimensional objects in your home. Write the name of the object on the line. Draw the 2-dimensional shapes that make up the object below it.

1. The object I found is _____.

The shapes I see in the object are:

2. The object I found is _____.

The shapes I see in the object are:

3. The object I found is _____.

The shapes I see in the object are:
